

# Insights from the CyberGRX Exchange

**One Fifth (20 Percent)** of an enterprise's third-party portfolio pose a high inherent risk

*A high inherent risk means if these third parties become compromised or unavailable, the fallout of that event will have a high impact on the enterprise.*

## Focusing on the Wrong Areas

Organizations tend to focus on the same set of vendors, but it is often the vendors they aren't looking at that pose the greatest risk.

## The most common third-party security gaps

Desktop and Laptop Protection

Server Protection

Virtualization Protection

## Participating in an Exchange improves CyberSecurity

Companies with a history of assessments have been incentivized to improve as they use feedback from the platform to address key control gaps.
