

Be Confident in your Third- Party Risk Management

Stop Chasing Assessments. Start Using Analytics.

Evolve your third-party risk management (TPRM) program to make vendor or portfolio-wide decisions with insights built off of data from over 13,000 attested assessments and 250,000 companies. Join top Fortune 50 companies to make faster, more confident cyber risk decisions with trusted data to secure their entire portfolio, no matter the size of your team.

Current Way	CyberGRX Methodology
Decide who to assess	Prioritize vendors based on risk
Request 1:1 assessments	Use Exchange data to reduce assessments
Evaluate each report	Pinpoint relevant unmet controls
Defer to vendor mitigation	Begin mitigation with data in hand
Manage your spreadsheet	Command an all-in-one platform

Forgo the manual process of managing vendor risk for an intuitive, data-driven approach backed by advanced machine learning of our standardized data to drastically reduce your assessment dependency.

Leverage the CyberGRX Exchange to access the top 85% of attested assessments. If one doesn't exist, use our patent-pending Predictive Risk Profiles, with up to 91% accuracy, to make confident, quick vendor decisions.

Use our data and tools to move from “volume-based assessment chasing” to a proactive risk analysis program tailored to your organization’s specific concerns while satisfying stakeholders and laying the foundation for scalability.

CyberGRX enables your team to make decisions faster with fewer resources.

Our way of solving a very complex problem is simple: start with the big-picture so you know what you're dealing with, provide trusted data to highlight your riskiest areas, pinpoint specific controls, and monitor your vendors.

Identify & Assess

Stop using spreadsheets to organize your portfolio; access the world's largest third-party risk Exchange to prioritize your vendors based on the risk they pose to your business and make confident assessment decisions.

PORTFOLIO MANAGEMENT

Get an overview of your entire third-party ecosystem with risk levels, the number of available assessments in the Exchange, and assessment status.

AUTO-INHERENT RISK

View which vendors expose you to risk across eight business assets: Business Processes, People, Digital Identities, Applications, Data Devices, Networks, and Facilities.

PREDICTIVE RISK PROFILES

Leverage predictive data with up to 91% accuracy based on firmographics, outside-in-data, and Exchange insights to prioritize which vendors need further evaluation.

Analyze & Report

Get meaningful insights and make informed decisions faster by using data to review your vendor's controls, tailored to your organizational structure or industry.

FRAMEWORK MAPPER

Evaluate your vendor by selecting from our library of industry frameworks or Cyber Threat Profiles based on real-world attacks to uncover which unmet controls will leave you vulnerable.

ATTACK SCENARIO ANALYTICS

Test your vendor against the global standard MITRE ATT&CK® Framework across twelve key security areas like "Credential Access" or "Exfiltration" to understand the risks important to you.

PORTFOLIO RISK FINDINGS

Discover the poorest-performing vendors or the most shared unmet controls in your portfolio when viewed through an industry framework or Cyber Threat Profile to hone in on your most significant threats.

Monitor & Secure

Mitigate vulnerabilities and breaches with continuous monitoring. Receive alerts about potential security issues with vendors so you can start proactive security measures.

RISK ALERTS

Receive near real-time alerts when any of our 41 risk rules get triggered by deep and dark web scans across categories like data leaks or breach intelligence.

MONITORING

Gain immediate intelligence of a vendor's rating from nine essential security areas and compare their health against the industry average.

Take the Next Step in TPRM

Understand Your Portfolio

Leverage our Exchange data and features to determine the risk hiding in your portfolio. Understand where the blindspots are and who warrants an assessment.

Prioritize Third Parties

View your third party's vulnerabilities through specific business or security areas that matter to you so you can address those who pose the greatest risk.

Manage Your Risk

Our portfolio-wide features give you the power to filter your portfolio through crucial security concerns, helping you to evaluate and understand any unmet controls.

Be Proactive

Get notified immediately if your vendors' security is compromised or attacked. Use the provided data to coordinate an effective risk reduction strategy.

Great Southern Bank

Great Southern Bank

"CyberGRX has added efficiency and productivity to our third-party risk management process by allowing quicker review cadence and control assurance at scale."

Verizon

"CyberGRX Predictive Risk Profiles provide me dynamic and immediate data on my third parties that I previously did not have with assessments alone. I have visibility to data on more than 50% of my third parties under management; I like CyberGRX because it removes the use of spreadsheets and manual information security reviews."

verizon

USC

The University of Southern California

"CyberGRX has moved our program from a volume-driven assessment program to a risk-based third-party program. We now have risk insight into 25% of our vendor population through the platform, a major improvement from the 5% we had before."

Book a demo today and gain free insights into your portfolio's riskiest third parties.

- 1** Upload your list of third parties into our Exchange.
- 2** Discover unmet controls and portfolio blindspots.
- 3** Manage your third-party cyber risk confidently.
